

# COST EFFECTIVE BOILER HIRE SOLUTION FOR SCHOOL

## The Challenge

---

A primary school's maintenance team was faced with no hot water for the school when the ageing 25 year old boilers failed. But since the school had no available budget for replacements until the new financial year meant a capital expenditure for a new boiler was impossible.

ICS Cool Energy:

"The school urgently needed to restore their hot water supply as soon as possible. Our engineers were able to quote, install and commission our industrial rental boilers within two days of receiving the initial call, putting the comfort of the school back in safe hands."

## WE MAKE IT WORK

### The Solution

On attending the site and conducting a site survey within 12 hours of receiving the initial call, ICS Cool Energy's Rental Applications Engineer recommended 2x 300kW boilers and a 3,000 litre bundled fuel tank which would deliver heating and hot water throughout the entire primary school.

ICS Cool Energy's powerful 300kW industrial boilers are housed within weatherproof steel containers, ideal for situating them outside. The flexible, compact boiler units are designed to operate reliably and safely and were sited away from access points to minimise disturbance and any noise interference to school activities.

### The Result

Education and public sector facilities have a wide range of choice with ICS Cool Energy's extensive range of products which are used in the designs of temperature control solutions to suit the individual needs of each location. Not only that, hiring equipment eliminates the need for capital expenditure, plus all the essential maintenance is taken care of.
