

NEW i-FC FREE COOLING RANGE & FLEX FINANCIAL SUPPORT - SAVING UP TO 80% ON YOUR COOLING COSTS!

**PROCESS TEMPERATURE CONTROL SPECIALISTS.
SALES. HIRE. SERVICE.**

INTRODUCING OUR NEW i-FC FREE COOLING RANGE

- Our i-FC free coolers can be used as a cooling solution in their own right or to provide free cooling for a significant proportion of the year when used in conjunction with a chiller
- Our new range is available with multiple fixed fan speeds, inverter speed control and

EC fans for varying noise applications as well as on low energy systems. The units control panels are designed to offer ease of use with a ‘plug and play’ solution and 4G connectivity.

- They can be configured to meet your individual project requirements such as low noise, space restrictions and aesthetics and integrate with BMS.

| i-FC MODEL | COOLING CAPACITY NOMINAL PROCESS CONDITIONS 15/20/10°C |
|------------|--|
| i-FC305 | 18 kW |
| i-FC416 | 52 kW |
| i-FC535 | 89 kW |
| i-FC660 | 157 kW |
| i-FC780 | 208 kW |
| i-FC7100 | 259 kW |
| i-FC065M | 232 kW |
| i-FC105M | 384 kW |
| i-FC115M | 435 kW |
| i-FC160XL | 606 kW |
| i-FC170XL | 676 kW |
| i-FC190XL | 746 kW |
| i-FC240XL | 908 kW |

INDEPENDENT OR INTEGRAL SOLUTIONS

Free cooling works with either a chiller with a built-in free cooling coil or a free cooler working in series with a chiller. The latter is more efficient, due to the larger surface area provided by the air cooler.

As ICS Cool Energy Free Coolers can cool the full duty for much larger parts of the year in lower ambient temperatures, they yield much higher energy and cost savings and improved carbon footprint of chilled water systems.

A remote free cooler is designed to do nothing but provide free cooling and has its own purpose built control system and 3-way valve and bypass system and therefore is a simple and reliable way to give maximum savings and quick payback.

As the system is fully packaged, complete with integral controls, 3-way valve & actuator and bypass pipe work, they can be easily installed on existing systems as well as new builds. No communication between the free cooler and chiller is necessary. In typical process cooling systems, chillers can be offloaded for up to 90% of the year.

BENEFITS OF FREE COOLING

- Reduction in mechanical energy consumption (up to 80%)
- Improved carbon footprint
- Fully offload chillers for up to 90% of the year
- Reduced load on mechanical parts, therefore reduced maintenance cost and extended life of equipment
- Smaller load demands can lessen the depreciation value of the chiller over its lifetime
- It is easy to retrofit (space permitting)
- Payback in as little as three months

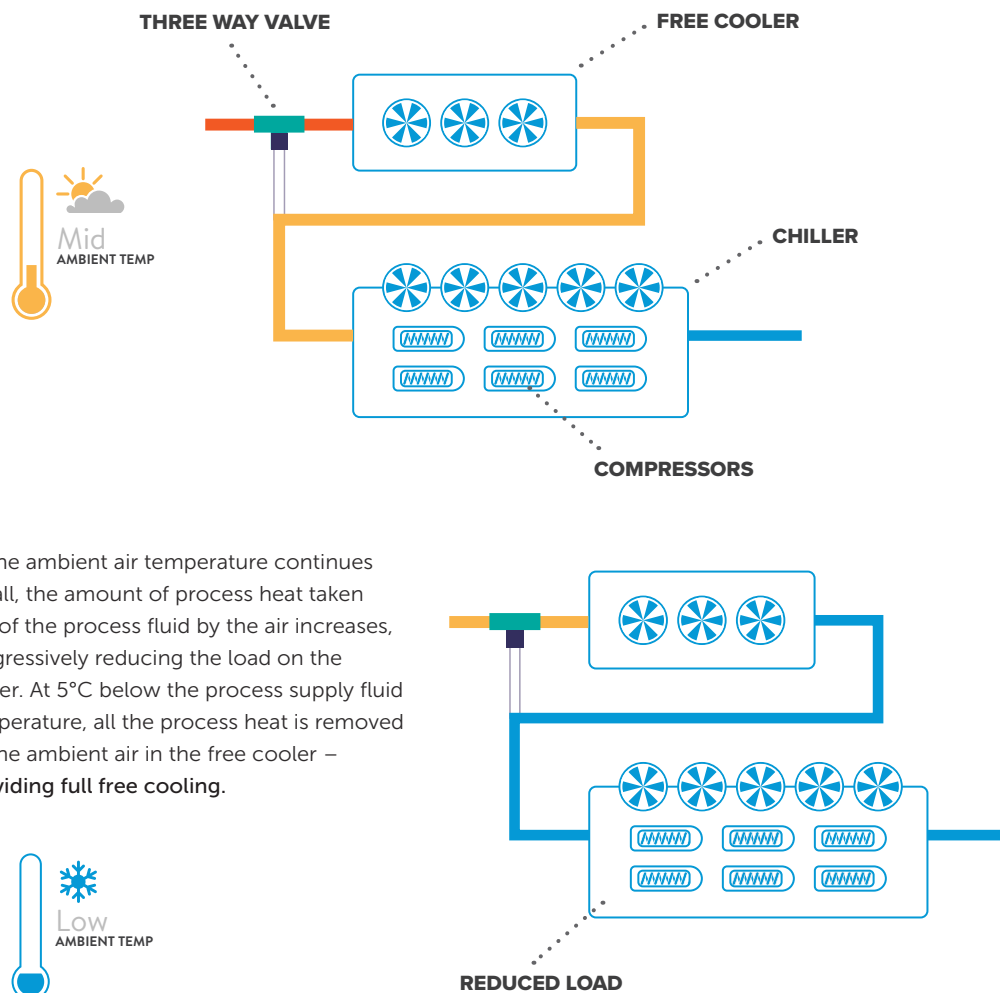

POTENTIAL ENERGY SAVINGS

FREE COOLING IN ACTION

When the ambient air temperature drops just 1°C below the process fluid return temperature, a 3-way valve diverts the returning process fluid through the free cooling coil in which the cooler ambient air removes process heat and cools the

returning fluid (partial free cooling), it then flows through the chiller's evaporator where the required set point temperatures are achieved – **easing the demand on your chiller's components and extending their operational life.**

INTRODUCING THE ICS COOL ENERGY FLEX

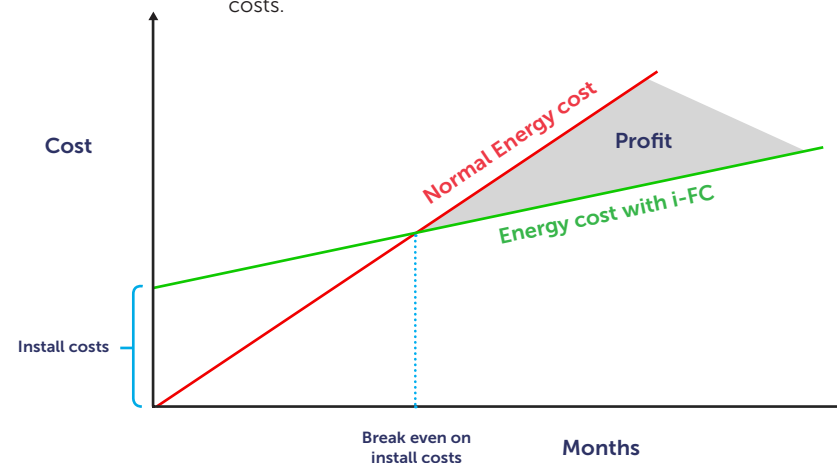

Would you like to benefit from energy savings without the need for capital investment? FLEX is our "Fixed Long-term Exchange" program

Our monthly FLEX package provides you with additional running cost reductions versus your existing plant running costs.

Key features and benefits:

- Fixed, hard-piped install to your process
- Long-term solution
- Energy savings
- Options to exchange & upgrade the equipment as technology improves
- No requirement for capital investment
- Bespoke product for the application
- Monthly or quarterly rental payments
- A minimum 5 year contract
- Fully inclusive cost incorporating warranty repairs for the contract duration
- Maintenance package included & provision of legislative compliance
- Annual cooling circuit fluid analysis
- Mechanical & electrical interconnection

Chart to show predicted energy savings in line with normal energy costs, after initial install costs.

TRIAL OPTIONS

Would you like to try FLEX first?

- Offers the ability to prove the FLEX concept
- Short term commitment
- Fully inclusive cost incorporating warranty repairs for the contract duration
- Maintenance package included & provision of legislative compliance
