

# HIRE HEATERS SUPPORT TENNIS COURT DRYING

## The Challenge

---

Unusually prolonged downpours led to localised floods affecting many facilities including indoor tennis courts at a major health club provider. The courts needed to be dried out quickly whilst ensuring no damage was done to the fabric of the building.

ICS Cool Energy

"Quick action was required and we were very happy to be in a position to provide both the technical expertise and rapid response that our customer needed."

## WE MAKE IT WORK

### The Solution

Following a site survey a number of IDF heaters were dispatched to the site to provide clean and dry heating in a safe and controlled manner. Each of the powerful heaters were provided with a bulk fuel tank to ensure prolonged and reliable running between fuelling. The units were sited outside and heavy duty ducting brought the hot air into the building where the hot air being helped to dry out the courts.

### The Result

The area was dried out rapidly with assistance with monitoring of the contractor in charge of flood recovery and mitigation.

“ The team have Excellent product knowledge, are always courteous and are very customer focussed. The standard of onsite works and documentation is also always to a very good standard and I would not hesitate in recommending ICS to my contacts and colleagues.

”
