

## ICS COOL ENERGY PROVIDES MOBILE COOLING SOLUTION FOR LOCAL BREWERY

### The Challenge

---

When the cooling system at a brewery had a breakdown, a fast solution was needed to secure the beer's quality. The cooling system had to maintain the temperature of a storage vessel filled with ice at a precise setting. Also, the temporary solution needed to provide cover for a six-week period while the main system was being repaired. A constant cool temperature was vital for the production process.

Mathias Handsche  
ICS Cool Energy GmbH

“Our cooling systems are always equipped for fast and efficient solutions, and our service team is eager to help.”

## WE MAKE IT WORK.

### The Solution

- Fast and detailed analysis and examination of existing cooling system
- Rapid design of a new cooling system to meet the brewery's exacting specifications
- Fast installation of a 130 kW cooling system
- Fully packaged Cool EVO 602
- Energy-saving hermetic Scroll compressors
- Wide range of temperature requirements (-10°C to +27°C)

Process cooling & maintenance package with on call emergency support

# 24/7

### The Result

With its robust and weather-proof housing and its quick connections, the chiller hire solution is suitable for fast installations and operations, which was essential for the project.

With the use of the temporary hired cooling system, it meant that repairs to the main system could be managed and carried out, avoiding production downtime.

Because the cold chain was ensured, the client could meet all the production- and delivery dates.

On completion of the repair programme, ICS Cool Energy returned to remove the hire equipment, allowing the main system to resume operation with minimum inconvenience. The fixed cooling system could resume operations.
