

KEEPING BUSINESS AFLOAT IN THE FLOODS

The Challenge

Minimising the misery and interruption to daily and business life when floods happen is a speciality for ICS Cool Energy's hire division, with a range of heating and cooling solutions that are ready to go at a moment's notice.

ICS Cool Energy:

"Floods cause untold misery every year and we make it our business to minimise that with fast, effective heating and cooling 24/7."

WE MAKE IT WORK

The Solution

Unprecedented floods and 'weather events' are never predicted and the effects are often devastating, interrupting the flow of daily life and business but ICS Cool Energy has the UK's largest fleet of heating and cooling equipment and the expertise to help restore order fast.

Pharmaceutical company

Flood water knocked out the site's cooling system and business was at a standstill. ICS Cool Energy was on site within a day with a temporary hire chiller, allowing production to resume.

Devon School

The school's hot water boiler failed as a result of floods and the school faced temporary closure due to lack of heating – potentially adding more pressure on busy working parents and chaotic transport links if the school closed. A temporary boiler solution was installed within hours, allowing the school to remain open.

Nursing Home

Flooding damaged the boiler at a care home for elderly and vulnerable people, leaving the home with no domestic hot water and in urgent need of help. ICS Cool Energy's engineers were on site to restore order that same day.

The Result

ICS Cool Energy's hire team is on call 24/7, with the industry's largest fleet of equipment that's in stock and ready to deliver quickly to all parts of the country when there's an emergency caused by flooding.

All equipment is thoroughly tested before its passed ready for hire and the teams are accustomed to working through the night to ensure heating and hot water is returned as soon as possible. And in the summer months, ICS Cool Energy's hire division also supplies cooling and air conditioning solutions – from total systems to spot cooling.

Every solution is specifically designed and installed to meet the individual needs of every business – whether it's in the case of an emergency, during maintenance work or for long term hire projects.
