

LEISURE CENTRES STAY IN THE SWIM WITH TEMPORARY BOILERS

The Challenge

Recreation and leisure facilities need to keep people 'in the swim' during essential refurbishment works and ICS Cool Energy has a range of hire solutions that provide temporary heating, cooling and hot water. And they work in all types and sizes of locations, ensuring it's business as usual and helping to maintain revenue streams.

ICS Cool Energy:

"The importance of keeping leisure facilities operating during refurbishments is critical to local communities and we specialise in delivering flexible, affordable solutions."

WE MAKE IT WORK

The Solution

A local authority in Scotland had a 17 month programme of remedial works for a popular swimming pool and needed a way to keep the facility open during the works.

A full service swimming pool specialist was called in to construct a temporary building in the leisure centre's grounds to house a 25m pool, complete with changing rooms, reception and toilets.

ICS Cool Energy's hire team, with extensive experience in the leisure sector was engaged to ensure the pool's temperature and changing facility for up to 60 people was warm and comfortable.

Following a comprehensive site survey, ICS Cool Energy provided a 150kW externally sited boiler. The powerful boiler is compact in design and housed within a steel container to protect it from the external elements ensuring fault-free, reliable operation, with ongoing maintenance and 24/7 emergency support included.

The Result

ICS Cool Energy has the most energy efficient boilers available, with an extensive range in stock and ready to go. It means that running costs are affordable as well as the hire solution avoiding the need for capital expenditure or maintenance.

ICS Cool Energy said "This was a great project for us, and one we're proud to have been a part of. The importance of making facilities such as this one accessible during refurbishments is critical to local communities and we're pleased to have been able to supply a reliable and powerful boiler to support the site for as long as necessary."
