

NO CRACKING UNDER PRESSURE FOR EASTER EGGS

The Challenge

ICS Cool Energy's temperature control solutions are hard at work delivering the perfect Easter eggs for a leading producer, supplemented by additional refrigeration from the hire division to meet peak season demands.

Dave Palmer
Strategic
Accounts Director

"With both our temperature control units and cold store systems on either end of the production line, the customer can be certain of the ultimate reliability for process temperature control."

WE MAKE IT WORK

The Solution

Supplying chocolate products for some of Europe's most prestigious brands, the customer relies on ICS Cool Energy's T90t temperature control units which supplies the fleet of jacketed vessels with a consistent supply of hot water, keeping the liquid chocolate at the perfect temperature.

With peak season production approaching and new customer orders, the chocolatier needed extra refrigeration to meet demand. One call to ICS Cool Energy with this urgent requirement meant that the hire division stepped in quickly with a supplementary cold store package.

The cold store has user-friendly controls and fork lift pockets for ease of installation and provides temporary additional storage for the temperature-sensitive chocolate products.

The Result

With the temporary cold store system in place, ICS Cool Energy provided an end-to-end solution allowing the producer to meet the peak seasonal demands and new customer orders with premium chocolate products, helping to boost potential for future sales growth.

Russ Baker, Sales Director for ICS Cool Energy's hire division added:

"As a business, we seek to provide our customers with total solutions and this is where our hire, service and sales teams work together to solve problems. Our range of cold storage is perfectly suited for temporary or seasonal needs, particularly where chocolate or other perishable products are involved.

"Hiring equipment helps customers manage production throughout busier periods, avoiding the need for permanent expansion."
