

# WE GET OUR SKATES ON FOR ICE RINKS

## The Challenge

---

Ice skating – indoors and out – is now a major leisure activity across Europe but coping with the cooling needs to keep the ice surface fresh when there's wind, rain and often strong sunshine or ice-melting temperatures is a challenge. It's one that ICS Cool Energy has been conquering at hundreds of venues across Europe, including London's famous Somerset House where not a session of skating has been missed over 10 years.

“ Despite all the weather challenges we faced, the continued success of the ice rink is testament to the wonderful and dedicated production team. I place in high regard the fact that you have committed to our aim to pioneer technological progress in ice rink build and operation. ”

Mark Nelson, Senior Partner, Ice Tech UK

## WE MAKE IT WORK

### The Solution

Winter weather is changing, with temperatures reaching as high as 18°C in central London in November and often dropping to well below freezing after Christmas, making it extra challenging for building and running popular winter ice rinks.

With nearly 30 years experience, ICS Cool Energy teams have developed a wealth of know-how to help ensure skaters of all ages have a superb experience.

High performance chillers, 24/7 on call service and on site redundancy (back up) is all part of the ICS Cool Energy hire team's service.

“Demand for our ice rink cooling just keeps on growing and it's because we don't let people down. We ensure our systems are immaculately maintained at all times and unlike some operators, we build in redundancy, so in the event of any system failure or extra challenging weather, there's back up chiller power on site,” explains Lee Chard, National Accounts Manager, Hire.

### The Result

The famous and picturesque winter ice rink at London's landmark Somerset House building is operated by Ice Tech UK, leading specialists in providing worldwide turnkey packages for indoor and outdoor ice rinks and ice systems for all types of applications.

Mark Nelson, Ice Tech UK's Senior Partner said:

“Since ICS Cool Energy came on board in 2007, we have provided over 6,500 skate sessions and entertained in excess of one million skaters. In that time we have not lost one session which remains a remarkable and unrivalled track record.

“Even when faced with extraordinary challenges, the combination of your cooling solution and our ice floor system together with resourceful on-site work by the technicians ensures our track record stays intact.

The continued success of this ice rink year on year is testament to the wonderful and dedicated production team and to the ICS Cool Energy teams whose work on site is exemplary,” he said.
